I am a Marine Bio major and have been searching for this coloring book for a little while now. You don't understand how happy I am that I have it. My highschool marine bio teacher/mentor used to use a few of these pages in her lessons. I learned so much from reading and coloring. I have wanted it ever since. My best friend is now going to buy one so we can color the whole book together. Highly recommended for anyone who loves the ocean. It has things on oceanography, different species, tidal zones, all sorts of fun stuff. I am thinking about bringing it out whenever company comes over. It will make an awesome conversation starter.

I love this coloring book ... I really wanted the human anatomy coloring book, but I was shopping with a 8 year old who wanted to get the same coloring book I got . I love marine biology so I figured this would be better for an 8 year old.... We spent a lot of time learning and coloring together.... It is a fun way to refresh or learn about marine biology.

I'm majoring in Marine Biology and I first stumbled upon this book in Barnes and Noble and they wanted \$20 for it, but I'm in college and money is kinda tight, so I looked for it online and bought this one. It's great. I haven't colored it yet.

I bought this for my 6 year old nephew, big mistake! He is crazy about marine biology and will probably color the pictures, but the text is for adults.

Using this in my Marine Biology class for high school students, it's been great to help illustrate some units. My only real drawback to this is that most of the pictures have stippling or shading which makes them a little busy and at times hard to color.

The book that arrived is just over 100 pages, the description states it is around 250. I am giving low marks due to false advertising. If the description was correct I would give the product three to four stars.

Absolutely love it! Have spent numerous enjoyable hours reading about various eco systems and then coloring the inhabitants. A great tool for learning more about the sea and a fun hobby for creative expression as well.

I took a Marine Biology class and this coloring book helped me learn the topics better than the actual text book! I am a visual learner and when you talk about layers and which animals are in each layer of sand, I will remember easier using this coloring book than I would reading it in a book. You learn about life cycles and reproduction cycles of animals and again the pictures and descriptions in this coloring book very much helped me learn better than the text book did. Plus, it is always fun to color!
