Trail Food: Drying And Cooking Food For Backpacking And Paddling

Synopsis

" . . . a book that will appeal to everyone who has ever choked down the pre-packaged, bargain-basement camp food (or gone bankrupt buying the good stuff)." --Canoe & Kayak . . . if you're on the lookout for a way to bring real meals to the field, [this book] might have the answer." --Field & Stream Life in the outdoors revolves around food--cooking it, eating it, packing it, carrying it. We even fantasize about it, especially after a week of eating store-bought provisions. This book is all about fulfilling those food fantasies and avoiding those expensive disappointments. Trail Food tells you how to remove water from food, to make it lighter and longer-lasting, without removing its taste. Learn to plan menus and prepare meals just like the ones you left behind, using fresh foods from your garden or market, prepared and seasoned the way you like them. Why fantasize when you can have the real thing?

Customer Reviews

Alan Kesselheim dries his food in Bozeman, Montana, where he lives with his wife and three children. He is the author of five books, including *Water and Sky: Reflections of a Northern Year* and *Going Inside*, and has published hundreds of magazine articles.

I purchased this and lipsmackin backpackin at the same time and found this one to be the best. You can control the food you put in your body, you can use up garden extras, and the ideas for cross-use of items are excellent. Also small enough to pack along if you're not a lightweight hiker. I

would highly recommend this as he's realistic about what you might want to purchase or not purchase to make the process easier - all budgets can afford his methods and he doesn't load you down with sodium. You can see my review of lipsmackin backpackin over there and find that sodium is a huge concern for me. It may not be a concern for you but even without that this book doesn't rely upon many store bought sauce packets or seasoning packets so you can choose what you like and enjoy your wilderness cooking that much more! In other words, if you have a husband as I do with high blood pressure this book will give you options that others don't. :)

I was looking more for recipes made simple for back packers. Many of the recipes in the book would work great if you did not have to carry everything on your back. Thirty minutes is too long to cook after a day of hiking. The book did have good instruction for how to dehydrate a wide variety of foods.

I have several books on dehydrating your own trail meals and this is easily the best. It is concise and full of good ideas and recipes. The guidance is flexible enough for the lightweight backpacker or for the canoe or pack mule traveler. For example, some of the recipes call for a dutch oven (too bulky and heavy for the lightweight backpacker) and others are suitable for a one pot meal (ideal for the lightweight backpacker). A nice feature is the chart of drying temperatures and times for different foods. Also, the chart of calorie and protein content of different foods is important to making sure you get enough calories to keep going in the field and enough protein to keep your body from consuming your muscle tissue for fuel. There are also plans for building your own dehydrator for the do-it-yourselfer. The suggested one week meal plan is a good guide to get you started on packing for a trip. The emphasis of this book is on drying individual ingredients and then rehydrating and combining them at meal time. This allows you to be more flexible in your meals, but takes a little longer at meal time. However, it also tells you how to use your own recipes to prepare a complete meal and then dehydrate it. Precooked spaghetti, rice or beans rehydrate and cook faster in the field. The book recommends having both types of meals with you for variety and flexibility. You can also dehydrate canned foods like vegetables or canned chicken, tuna or salmon and use them in your recipes. This book is concise and a fast read, but packs a lot of information. This means that you need to pay attention to pick up all the important points. Fully half of the book gives information on dehydrating and meal planning as well as other important instructions and the other half gives some excellent recipes. One important point (based on experience) is to be sure to try the recipes at home on the same stove and cooking utensils that you will have in the field. You want to make sure

that you have everything you need and know how to use it BEFORE you are in the field and cold and wet and tired and hungry. That's not a good time to find out that you need another pot or that your pot isn't large enough to properly prepare your recipes!"Trail Food" is all you need to dehydrate your own meals, but a few other general books on dehydrating wouldn't hurt to help you gain a full understanding of all the nuances of dehydrating.Excellent book!

I got this primarily for the food drying ideas and was impressed by how much information is in it. Fantastic for backpackers and hikers, I'll use some of these techniques for food storage in my home as well and for making soup mixes that can be made easily when my family is in a rush. The author suggests precooking foods like rice and noodles, then dehydrating them so they cook faster. There are extensive tables explaining what texture your finished dried food should be at, tips for storage and many recipes. Some of them are vegetarian and many of them could be easily adapted to being vegan as well.He also includes plans for building your own food dehydrators, one heated by a light bulb, the other, solar.A wonderful inspiring book for finding new ways to pack nutritious and good meals.

Great book! If you are just looking for advice about how to go about food when ice isn't available then this is a book for you! There are very simple recipe ideas throughout the book. I am approaching a week long backpacking trip and this will be my first time doing my own dried food. This book helped provided the ideas I needed to create my own meals, what foods work best drying, cooking/soaking techniques, and ect. I would definitely recommend this book to any backpacker wanting to make their trip a little more tasty!

Lots of good ideas, advice and recipes. I was already dehydrating some of my backpacking food, but this inspired me to expand my back-country menus considerably. My trail meals are better and I have a lot more variety. Maybe I would have stumbled into some of these things eventually, but this book definitely accelerates the process. You will need a dehydrator to really take advantage of these ideas.

If you are looking for ideas for an outdoor menu while on the trail this book has many great ideas and recipes. If you are interested in long term food storage this book is also a great resource. I have been an avid outdoors sportsman for many years and thought I had my outdoor cooking a food prep for long trips with minimum space and weight down to a science but I gained many new ideas from

this book and can now have a wider variety of meals while away from home without adding much bulk to my pack or kayak. I have even used some of my new knowledge to add variety and nutrition to my kids' school lunches. From overnight campers to multi day trippers and those looking to be more self sufficient this book makes a great reference to add to your library.
