Wyllie's Treatment Of Epilepsy: Principles And Practice

Synopsis

Meet the challenges of epilepsy treatment with today's best knowledge! Wyllie's Treatment of Epilepsy: Principles and Practice, 6th edition, provides a broad, detailed, and cohesive overview of seizure disorders and contemporary treatment options. Written by the most influential experts in the field and thoroughly updated to provide the most current content, Wyllie's Treatment of Epilepsy assists neurologists and epilepsy specialists, neurology residents and fellows, and neuropsychologists in assessing and treating their patients with the latest treatment options. Dr. Wyllie is once again joined by associate editors Dr. Barry Gidal and Dr. Howard Goodkin, as well as newcomers Dr. Joseph Sirven of the Mayo Clinic and Dr. Tobias Loddenkemper of Harvard Medical School. Features: In-depth review of the subspecialties of epileptology, i.e., neuroimaging, epilepsy surgery, antiepileptic medications Comprehensive single-volume text on epileptology Clinically oriented, evidence-based reference Online bank of over 500 board review-style questions highlighting key concepts for board examinations and clinical practice Now with the print edition, enjoy the bundled interactive eBook edition, offering tablet, smartphone, or online access to: Complete content with enhanced navigation A powerful search that pulls results from content in the book, your notes, and even the web An online bank of over 500 board-style review questions Cross-linked pages, references, and more for easy navigation Highlighting tool for easier reference of key content throughout the text Ability to take and share notes with friends and colleagues Quick reference tabbing to save your favorite content for future use See the inside front cover to find out how to access your eBook!

Customer Reviews

This book has a number of excellent features. The content is diverse, up to date, and comprehensive, containing useful tables and images, including an electronic textbook with typically 5 test questions at the end of each chapter. The range and detail would meet the requirements for the epilepsy board certification exam. This book has weakness; information best represented in tables, outlines, or illustrations is presented as lengthy, redundant text. The reader will need to generate brief notes, identify significant relationships and generate the relevant tables, outlines or visual aids needed to understand the book's content. Ultimately, what could have been a 600 page excellent learning resource is transformed to a lengthier 1024 page book requiring considerable work from the reader. There are additional problems. The book uses a multitude of non-standard abbreviations with no master table to decode the abbreviations. The electronic book limits the amount copied from the book every 24 hours. Authors describe statistically insignificant outcomes as showing a "trend," write extensively about uncontrolled or observational studies with small sample sizes. Providing a greater number of questions at the end of each chapter to evaluate the full content of each chapter would have been better. Overall, it is a good book because it is comprehensive and detailed, however, the failure to provide more comprehensible tables, outlines, and illustrations combined with lengthy and redundant style of writing places a significant burden on the reader. The online ILAE diagnostic manual and online epilepsy textbooks from the NCBI bookshelf provide a free alternative to this book.
