Customer Reviews

Grade 4-8-Behler begins with an overview of characteristics applicable to all reptiles. Next, individual North American species are organized into four groups: crocodylians, turtles, lizards, and snakes. Clear, full-color photographs and short capsules of information make it easy to identify each animal and its relatives. The introduction in *Trees* addresses the characteristics of different North American types, which are then categorized by the shape of their leaves. However, not all trees with the same type of leaves are grouped together, making this title more difficult to use than *Reptiles*. In addition, some of the photographs are so small that it is impossible to use them for identification purposes. Both books include warnings if an animal or plant is considered harmful. Purchase *Reptiles* as a general introduction to the subject and *Trees* as a supplement to George A. Petrides's *Peterson First Guide to Trees* (Houghton, 1993) or Herbert Spencer Zim's *Trees* (Golden, 1989). Michele Snyder, Chappaqua Public Library, NY Copyright 1999 Reed Business Information, Inc.

A wonderful introduction to field guides for the elementary set.

A bit out of date, lacking information on familiar topics. I would love to see these published new and updated.

Great book for beginner's to identify different types of trees.

very satisfied with the purchase.

lovely book.

This is a book that I needed and I am very grateful to you for having it available to purchase at an affordable price.

yep

I bought this book for my preschool grandchildren that I care for part time. I had purchased the shell book at a garage sale & they loved it. So I went online to find other book in the same series. It is something that I can enjoy with them together.
