Customer Reviews

"This is an incredible resource for any dental practitioner - DCP and dentist alike. The book is over 500 pages in all, but it is very easy to use as a reference resource due to the fact that each chapter begins with an outline of its contents and therefore a quick scan of the first page of each chapter will direct the reader to specific information if that is what is required. On the other hand, a more leisurely read gives valuable background information to the aspects of pharmacology which we take for granted on a daily basis. Important points within the text are summarised through the use of tables and boxes which make it easier to understand. The book has a very informative appendix section including a list of the top 200 most prescribed drugs, and what they are used for. This book is a must on every dental practitioner's shelf - it should not be restricted to the dental hygienist!" Marina Harris. Vital, Volume 4. Winter 2007

I'm not very far into reading it, but so far the reading is very comprehensible. It seems to be organized well. I wish there were more illustrations, such as showing pathways through the body, etc. Otherwise, I like the book and I'm using it constantly for the class. It is not a book you just buy and then put on your shelf.

Pharmacology for the Dental Assisting Professional...very in depth and interesting. Great layout!

REQUIRED BOOK

Received the book as described.

Good textbook, nicely presented, everything is listed and grouped in a well organised manner. The book could do with a bit more colour. Does not contain mathematical equations needed for pharmacy.

I like the book because I never get lost. I like the layout and how they word. The book also has some cool stuff at the back - Appendix. Check this out.
