Environmental Health: From Global To Local (Public Health/Environmental Health)

Synopsis

The bestselling environmental health text, with all new coverage of key topics *Environmental Health: From Global to Local* is a comprehensive introduction to the subject, and a contemporary, authoritative text for students of public health, environmental health, preventive medicine, community health, and environmental studies. Edited by the former director of the CDC's National Center for Environmental Health and current dean of the School of Public Health at the University of Washington, this book provides a multi-faceted view of the topic, and how it affects different regions, populations, and professions. In addition to traditional environmental health topics—air, water, chemical toxins, radiation, pest control—it offers remarkably broad, cross-cutting coverage, including such topics as building design, urban and regional planning, energy, transportation, disaster preparedness and response, climate change, and environmental psychology. This new third edition maintains its strong grounding in evidence, and has been revised for greater readability, with new coverage of ecology, sustainability, and vulnerable populations, with integrated coverage of policy issues, and with a more global focus. Environmental health is a critically important topic, and it reaches into fields as diverse as communications, technology, regulatory policy, medicine, and law. This book is a well-rounded guide that addresses the field's most pressing concerns, with a practical bent that takes the material beyond theory. Explore the cross-discipline manifestations of environmental health Understand the global ramifications of population and climate change Learn how environmental issues affect health and well-being closer to home Discover how different fields incorporate environmental health perspectives The first law of ecology reminds is that 'everything is connected to everything else.' Each piece of the system affects the whole, and the whole must sustain us all for the long term. *Environmental Health* lays out the facts, makes the connections, and demonstrates the importance of these crucial issues to human health and well-being, both on a global scale, and in our homes, workplaces, and neighborhoods.

HOWARD FRUMKIN, MD, MPH, DrPH, is Dean and Professor of Environmental and Occupational Health Sciences at the University of Washington School of Public Health. He formerly served at the U.S. Centers for Disease Control and Prevention, first as director of the National Center for Environmental Health and Agency for Toxic Substances and Disease Registry, and later as Special Assistant to the CDC Director for Climate Change and Health.

This textbook has probably been one of my best ones. The concepts are communicated clearly but not so much that I fall asleep reading. The examples are also fairly relate-able and modern. If you're looking for a textbook to assign, this is a pretty good one.

Used this for school. Came in great condition.

Rented the book for a college class, May end up liking. I'll admit I've never had a college textbook that I can sit and read. This one I may end up buying at the end of my rental. Great resource!

I was charged for this book. When I rented it to UPS !!!!! I am owed a refund!!! it's very informative and an easy read!

Nice book for EHS beginners!
