Customer Reviews

This attractive compendium of information about space is encyclopedic in the sense that its scope is broad. The facts are presented in two- to eight-page highly illustrated articles within five thematic sections. The first section, "What We Know," comments on matters as diverse as the big bang, dark energy, near-earth objects, and solar storms. The two longest sections are the tour of our solar system (including dwarf planets and the Oort cloud) and the outward-looking presentation on stars, galaxies, and the universe. The final sections, "Are We Alone?" and "Dreams of Tomorrow," look to the future. The articles are clearly written and informative, but the visuals steal

the show. Beautifully reproduced on heavy, glossy pages, the illustrations include Aguilar's often striking, imaginative artwork as well as many excellent images from NASA. While the large pictures often show dramatically lit views of stars, galaxies, and planets, the smaller pictures include useful cutaway views of planets and stars. An informative volume at a very reasonable price. Grades 5-8.

"This factual and beautifully designed overview presents new astronomical information that will enlighten and entice readers. Dazzlingly illustrated with full-color NASA satellite photography, as well as original art created, photographed, and computer painted by the author, it's a page-turner." --School Library Journal, starred review

"This outstanding volume showcases the brilliant color photography and illustration for which National Geographic is best known." --Library Media Connection

I bought this for my 10 year old nephew for Christmas. He was wanting some science kits and stuff this year and he has been really into certain areas of astronomy after watching The Martian and he keeps asking me to look at my astronomy books which are too technical for him, but I found this online. He was very happy with the gift and while a some of the information is still a bit beyond him, he's been having fun looking at the pictures and reading bits and pieces of the data about the different planets and such.

Got it as a gift for my twelve years old daughter, who is very interested in Astronomy, and she loves the book. Great context, illustrations and explanations.

My eight year old LOVES this book. It's made very well and the pictures are great. We've learned a lot from this book.

Received today .. fast shipping, new clean book. First impression is great and happy with the purchase. But, there are many tiny fonts on black background, which isn't easy to read for young children, especially who are English isn't their first language.

Gave it to a bright young lady, and she loved it! Suitable for anyone from a bright 9 year old to adult.

My 8 year old absolutely LOVES this book. The pics are awesome & the reading level is appropriate. Great reference book for a child's library. No regrets whatsoever. Would highly recommend.

Great book, I bought it for my son and he really enjoys it. This has right amount of information and new findings which I even didn't know. Heard about Haumea (<https://en.wikipedia.org/wiki/Haumea>) before ?

Got this for my 9 yr old's bday. He references the cool photos and illustrations. I Found myself reading it cover to cover. Totally fascinating.
