# Amazing Leonardo Da Vinci Inventions You Can Build Yourself (Build It Yourself Series)

## Synopsis

From armored tanks and gliders to "plastic glass" and drawing machines, this interactive book explores the incredible mind of Leonardo da Vinci through hands-on building projects and activities. Most of Leonardo's inventions were never made in his lifetime and remained sketches in his famous notebooks; kids examine some of these original sketches and learn about the models he made of his inventions. From there they delve into detailed step-by-step instructions, diagrams, and templates for each project, which are interspersed with historical facts, biographical anecdotes, and trivia. Most of the building can be done using simple household supplies: construction paper, tape, markers, glue, cardboard tubes, aluminum foil, and cardboard boxes. Background about the Renaissance as a period of remarkable achievement in art and science appears throughout the book.

## Customer Reviews

This book, Amazing Leonardo da Vinci Inventions You Can Build Yourself sold by Maxine Anderson

is just that... AMAZING!! If the inventions weren't amazing enough (which they are of course), you'll definitely learn A LOT with the content. The book is thorough, awesome, easy read and great for an extracurricular activity for students... and adults alike!!

This book is good for 8+ year old inventor types. However, parents be forewarned: you better be handy because most of these inventions require an adult to do much of the construction.

A hands on kind of book where you learn a bit about DaVinci and you also get to reproduce some of his projects. Projects are reasonably interesting and done with various easy to find materials like cardboard, pieces of wood and other household materials. Make your own paint, Hydrometer, hygrometer, trebuchet and stuff like that. Over all I like the way this book is handled with both interesting stuff about Davinci and some hands on projects. Great for curious minds.

This was perfect for our 8 year old son . We just purchased this second one for a birthday gift for a 9 year old . There are so many small and larger scale inventions to be made . A lot of the stuff you'll find that you already have on hand . Makes for inexpensive entertainment and great for family night .My son is on the autism spectrum and was totally engaged and absolutely fascinated by the things he could create .I would highly recommend this book . Beats playing video games hands down !

This was a gift for a Science-obsessed niece. Some of the projects are a lot more difficult than others, but she seems to like it.

What a simply great book any kid would love this one boy or girl,heck i am 52 and i bought it for me.....history and fun and learning, great supporting websites printed in the back pages of the book too.fun experiments,this is just simply an invitation for an afternoon of fun with your son or daughter.....

I was expecting a little more challenging inventions.

I purchased this book for a summer camp program. It gives you some good ideas but the directions are terrible. You have to do a ton of experimenting to get anything to work. The project on page 80, the ornithopter even has errors in the diagrams. Disappointed!
