Anna Kaziunas France teaches the "how to make (almost) anything" rapid prototyping course in digital fabrication at the Fab Academy at AS220. She is also the Dean of Students for the Global Fab Academy program. She wears many hats and has worked as an information architect, user experience designer, usability specialist, interaction designer, experimental fabricator, artist and teacher. She loves Providence, Rhode Island and is in the process of scanning and printing it.

Definitely not what I was expecting. This book is more of a marketing scam than a technical book. Quick buy this book for troubleshooting and maintenance tips. NOT, how about buy this book and we will tell you to save your time and have your prints done elsewhere! Gave it two stars because it has color photos..... actually I am still not sure why I am giving it two stars. If there was a zero I

would give it a one star.

Good introduction to 3D printing, you could find most of this information on the web and I knew that before I purchased. However I wanted everything in one easy place to research. If you're new to 3d printing this is a good place to start.

Excellent source for information on 3D printing. Gives good sense of where to go for enhancement of information. The 3D printer reviews help with determining which machine is best for you.

This is a good starter book. I like all of Make's publications, but this one got me up and running with 3D printing.

Best book I have ever read for 3D printing. It has become my go to bible for it all. A MUST for anyone printing
