Great reading!

I recommend it.

Very good book

This "book" is just a list of formulas with at most two paragraphs on each subject. I don't know how anyone could endorse this book as an introduction to power system protection. Wikipedia can easily beat this book. I'm out the \$15 I spent at ABEbooks. Instead consider the Lewis Blackburn books for the basics. If you can find a used copy of the Westinghouse "applied protective relaying", that is a good option. A few chapters in the SEL book are helpful. Check out the IEEE C37.xxx family of standards.
