# The Everything Kids' Science Experiments Book: Boil Ice, Float Water, Measure Gravity—Challenge The World Around You!

## Synopsis

Science has never been so easy--or so much fun!With The Everything Kids' Science Experiments Book, all you need to do is gather a few household items and you can recreate dozens of mind-blowing, kid-tested science experiments. High school science teacher Tom Robinson shows you how to expand your scientific horizons--from biology to chemistry to physics to outer space.You'll discover answers to questions like:Is it possible to blow up a balloon without actually blowing into it?What is inside coins?Can a magnet ever be "turned off"?Do toilets always flush in the same direction?Can a swimming pool be cleaned with just the breath of one person? You won't want to wait for a rainy day or your school's science fair to test these cool experiments for yourself!

## Book Information

Lexile Measure: 950 (What's this?)

Series: EverythingÃfâ  Ã  Â® Kids

Paperback: 144 pages

Publisher: Everything; unknown edition (October 1, 2001)

Language: English

ISBN-10: 1580625576

ISBN-13: 978-1580625579

Product Dimensions: 8 x 0.3 x 9.2 inches

Shipping Weight: 8 ounces (View shipping rates and policies)

Average Customer Review: 4.6 out of 5 stars 1,091 customer reviews

Best Sellers Rank: #569 in Books (See Top 100 in Books) #1 inÃ  Â Books > Children's Books > Science, Nature & How It Works > Experiments & Projects #24 inÃ  Â Books > Children's Books > Growing Up & Facts of Life > Friendship, Social Skills & School Life > School #27 inÃ  Â Books > Children's Books > Education & Reference

Age Range: 7 - 12 years

Grade Level: 3 - 7

## Customer Reviews

Tom Robinson teaches high school science and math and has coauthored an online advance placement physics course. He lives in the Seattle, Washington area.

There are so many great experiments in this book!! Pay attention to the age range of 7-12 years. Some experiments, even for a 7 year old, need parental assistance. We bought this for our nephew.

His mom is a school teacher and picky about educational items, but she said this book is a HIT. She and he love it and have been doing experiments together. If you have a little scientist, this book has a lot of great things to try out.

Great little science book for the young learning mind. My grandson is in the first grade and I thought he might like to know about some things in this world and how they work.

Bought as a gift for a 10 year old boy. His parents told us that him and his sister were excited about doing some of the projects and already had a few picked out... so I'm guessing it's a winner while being educational as well.

This is a fun book for over the summer with kids your kids love science this has a lot of fun stuff to do I recommend for ages six and up

My husband and sons have a great time building and exploring with the different experiments. Our 6 year old especially loved building the volcano with a king soda and vinegar. He got a kick out of it making a mess.

Just bought this for my younger brother for his 9th birthday. He loves creating his own experiments and this is a great way for him to see some experiments and fully understand what is happening and why it's happening. Most of these experiments can be done by an older child (5+) by him/herself or with a friend. Very few require advanced set-up or adult help which is great. I intend to purchase this book for my son for his 5th birthday as well so we can do some of these experiments at home! Highly recommend.

This book came a day earlier than expected. I leafed through it, and it looks like experiments my students (or their parents) will enjoy reading about while waiting for their music lessons--or trying out at home. Education at its most fun! Good size, with an inviting glossy cover. Makes me wish I could homeschool all over again!

My grandson LOVES doing the experiments in this book! He does have to do them with a parent but I would recommend that for any experiment!
