Crime Prevention Through Environmental Design, Third Edition

Synopsis

Crime Prevention Through Environmental Design, 3e is a vital book for anyone involved in architectural design, space management, and urban planning. The concepts presented in this book explain the link between design and human behavior. Understanding this link can enable a planner to use natural environmental factors to minimize loss and crime and to maximize productivity. This practical guide addresses several environmental settings, including major event facilities, small retail establishments, downtown streets, residential areas, and playgrounds. A one-stop resource with explanations of criminal behavior and the historical aspects of design, it teaches both the novice and the expert in crime prevention how to use the environment to affect human behavior in a positive manner. Fully updated with substantial new material in each chapter. Useful illustrations describe the design and layout concepts in an easy to understand manner. Written by a well-qualified author in the field of crime prevention.

Customer Reviews

"After 30 years of using various forms of crime prevention through environmental design (CPTED) in planning and executing facilities security, I found this book to be one of the most beneficial tools to assist me in using these principles. This book is a valuable resource for anyone seeking a professional certification." -- SecurityManagement.com and in ASIS Dynamics, August 2014 "The third edition of this book is vital for anyone involved in architectural design, space management, and urban planning. A one-stop resource with explanations of criminal behavior and the historical aspects of design, it teaches both the novice and the expert in crime prevention how to use the

environment to affect human behavior in a positive manner." --SecurityPark online,
December 2013

Lawrence J. Fennelly is an internationally recognized authority on crime prevention, security planning and analysis, and on the study of how environmental factors (CPTED), physical hardware, alarms, lighting, site design, management practices, litigation consultants, security policies and procedures, and guard management contribute to criminal victimization. Mr. Fennelly was previously employed with Apollo Security, Computershare, Inc., as well as a sergeant at Harvard College, employed by the Harvard University Police Department in Cambridge, Massachusetts. He was trained as a crime prevention specialist and served in this capacity for over 21 years at Harvard. He was also the department's training officer and assistant court officer. As part of his role as an officer at Harvard, Larry also was a deputy sheriff in both Suffolk and Middlesex counties (Massachusetts). Mr. Fennelly is a frequent speaker and lecturer on CPTED, physical security, school crime, and other issues. He serves as an expert witness who works closely with attorneys in defense as well as plaintiff cases, assisting in case preparation, offering knowledgeable questions to ask the opposing side, etc. He has also done a considerable amount of consultant work throughout the United States. His experience ranges from identifying vulnerabilities to conducting security and lighting surveys, working with architects to design and implement security, and developing long range guard training programs and risk assessments of various facilities. He is also a prolific author. His titles include such well-known security books as "Crime Prevention Through Environmental Design," "Effective Physical Security," and "Handbook of Loss Prevention and Crime Prevention."

If you are reading this review, then you probably have no choice but to buy this book because it's for a college class. I get that. But let me tell you, the book is actually pretty good. The book makes ample use of real-world examples and is not just theory. Unfortunately, much of the material becomes repetitive, as you can only recommend cutting the bushes and installing lighting so many times in one text. Seriously though, the book does have some good material and presents it in an orderly, logical fashion, and does have content that would be beneficial to the student of crime prevention through environmental design.

This book is fine for some sections, but in others it's comical. I understand that feng shui used in the past and still today, but no boss or building inspector is going to go for it when putting together a

realistic safety plan for a school system. It's also repetitive and seems to cover the same topics in different chapters.
