Harnessing Bistable Structural Dynamics: For Vibration Control, Energy Harvesting And Sensing

Synopsis

This book formulates and consolidates a coherent understanding of how harnessing the dynamics of bistable structures may enhance the technical fields of vibration control, energy harvesting, and sensing. Theoretical rigor and practical experimental insights are provided in numerous case studies. The three fields have received significant research interest in recent years, particularly in regards to the advantageous exploitation of nonlinearities. Harnessing the dynamics of bistable structures--that is, systems with two configurations of static equilibria--is a popular subset of the recent efforts. This book provides a timely consolidation of the advancements that are relevant to a large body of active researchers and engineers in these areas of understanding and leveraging nonlinearities for engineering applications. Coverage includes: Provides a one-source reference on how bistable system dynamics may enhance the aims of vibration control, energy harvesting, and sensing with a breadth of case studies Includes details for comprehensive methods of analysis, numerical simulation, and experimentation that are widely useful in the assessment of the dynamics of bistable structures Details approaches to evaluate, by analytical and numerical analysis and experiment, the influences of harmonic and random excitations, multiple degrees-of-freedom, and electromechanical coupling towards tailoring the underlying bistable system dynamics Establishes how intelligently utilizing bistability could enable technology advances that would be useful in various industries, such as automotive engineering, aerospace systems, microsystems and microelectronics, and manufacturing

Book Information

Hardcover: 408 pages

Publisher: Wiley; 1 edition (March 20, 2017)

Language: English

ISBN-10: 1119128048

ISBN-13: 978-1119128045

Product Dimensions: 6.8 x 1 x 9.8 inches

Shipping Weight: 1.7 pounds (View shipping rates and policies)

Ryan L. Harne, University of Michigan, USA Dr. Harne is a Research Fellow in the Department of Mechanical Engineering at the University of Michigan, Ann Arbor. His current research interests include vibration energy harvesting, control, and mitigation; smart structures and adaptive systems; sensing, sensors, and detection strategies for structures representing scales from nano- to macro.

Kon-Well Wang, University of Michigan, USA Professor Wang is the Stephen P. Timoshenko Professor and Chair of Mechanical Engineering at the University of Michigan. Professor Wang's main technical interests are in structural dynamics and adaptive structural systems. He has served as the Chief Editor for the ASME Journal of Vibration and Acoustics, and is currently an Associate Editor for the Journal of Intelligent Material Systems and Structures.
