Life Under The Lens: A Scientific Colouring Book

Synopsis

This unique colouring book explores the beauty of Life Under The Lens. This book is both a field guide to the microscopic world and a therapeutic colouring book which aims to illuminate some of the findings of modern science and technology. It consists of 50 intricate pen and ink illustrations accompanied by written descriptions of each organism. Colouring artists and students are invited to colour the filamentous strands of photosynthetic cyanobacteria, overlapping plates of marine coccolithophores and shade the armoured exoskeleton of crustacean larvae. The illustrations are stylised and highly decorated for the colourist while visually communicating the structure and biological functions of the organisms. It takes the colourist to the unobservable, a world beyond the limits of our own vision.

Book Information

Paperback: 106 pages

Publisher: Jennifer Delaney (June 3, 2017)

Language: English

ISBN-10: 1999742206

ISBN-13: 978-1999742201

Product Dimensions: 8.5 x 0.2 x 11 inches

Customer Reviews

From petroglyphs to lithographs and paintings to photomicrographs, beautiful depictions of animals and plants have informed and delighted us throughout human history. Today, much of our attention is consumed by animals that are either large and frightening or small and cuddly. All the while, we miss the organisms too small for the naked eye. Yet it is these tiny lifeforms that make everything else possible. In this gorgeous "scientific colouring book", Jennifer Delaney offers us a glimpse into the microscope at the beauty, symmetry, and complexity of "life in its smallest form". From algae and diatoms to pollen and moss to microbes you might remember from biology class (Euglena and Foraminifera) to the sadly prevalent and gastritis-inducing E. Coli, each page is an education and a

joy to behold. The explanatory notes on each organism are intriguing and concise. Color these lovely drawings if you wish, but for me, they are perfect with no further embellishment. Studying a page or two a day offers a welcome mental respite from the world of distraction and disinformation.

I LOVE this adult coloring book. As a scientist-mom with 2 young girls, I have been looking for a relaxing coloring book to work in for a while. As someone completely smitten by the amazing microscopic world - Life Under the Lens is PERFECT. The images are beautiful and creative. I also love that there's a short description of the image on the opposing page. My daughters (4 and 9) have enjoyed helping me color the book. We've had some fun science discussions coming out of our coloring time too! Will be my go-to science gift for kids and adults alike.

Not only is Jennifer Delaney's Life Under the Lens scientific coloring book full of amazing and intricate science art, it also has information on all the featured organisms. It's great!
